Fund Overview

The FP CRUX UK Fund employs a rigorous screening process that asks three key questions:

- Do we understand the business?
- Is the business comfortably economic over the cycle?
- Do we trust the management?

Companies that pass all three stages of the screen are then put through the same valuation process that looks at their characteristics and cash generation through the business cycle which tends to lead to the selection of stocks with characteristics that include: low capital intensity, consumer brands, strong balance sheets, barriers to entry and durability. This rigorous valuation enables a long-term, low-turnover approach that looks beyond short-term volatility to deliver long-term dividend and capital growth.

The Fund is a high conviction, concentrated portfolio of 20-30 stocks that is long-only equity. It is based on long-term investment, not speculation, leveraging the power of compounding.

The Fund exploits market inefficiency by investing for the long-term in underappreciated companies. By applying a demanding and consistent screening and valuation process we ensure only those businesses with the best long-term potential are selected for the portfolio. We believe that price matters most; buying these companies at the right price – below their intrinsic worth – will produce investment outperformance over time. The Fund has the ability to invest up to 15% in non-UK stocks.
